

Professional cemetery
management software

The best partner for cemetery
management at its finest

eternal
the memory cloud

eternal

manager side

professional eternal is a professional site management software specially designed to address the growing need for computerization of cemeteries.

user-friendly The fully graphic display makes it unique and extremely user-friendly. The interface has been cleverly designed to enhance its use and its versatility. The era of endless complicated forms is well and truly over.

visual eternal is unique due to its geographical representation of the site. A fully interactive map provides access to data specific to each plot via a combination of tooltips and sidebars. All the crucial information appears at the touch of a button.

intuitive The software is very intuitive and does not require any specific knowledge. It is easy to understand and will allow managers to easily handle reservations and burials, create services, generate records, or issue customized invoices.

technical The avant-garde technologies used mean that no installation is required. It works on all desktop or mobile systems and centralizes in real time data keyed in by different users.

features

- Full visual map management
- Photographs of the graves
- Creation of plot templates
- Ultra-fast search of a person, plot or relatives
- Add/Delete plots easily on the map
- Display the names or plot numbers directly on the map
- Multi-level grave management
- Full management of the deceased and non-deceased (relatives, payers)
- Management and creation of services
- Management of reservations and burials
- File management
 - Simplified editing of any data on the system
 - Leasehold management and capacity estimates
 - Automatic generation and archiving of invoices or records
 - Customizable summary dashboard
 - Statistical engine
 - Multi-platform deployment on iPhone, iPad, Android, Windows, Mac Os, Linux
 - Viewing interface on public access sites (kiosks, touch screens, mobile devices)
 - Web interface for online viewing
 - On-board mobile system for updates, taking pictures and geolocalization
 - Security and daily backups
 - Remote connection allowing fast offsite interventions

benefits
eternal requires no training and no installation. From the beginning, it will save time and offer outstanding levels of professionalism and rationalization.

A pioneering software, together with a dedicated, qualified, responsive and customer-orientated team make it the ideal setup for a long-term partnership.

visitor side

Searching for a loved one has never been so easy. In a few seconds, it is now possible to find the exact location of a grave on a map, together with all the related data.

Visitors are able to view the data from kiosks located at the cemetery's entrance. No one will ever get lost, or need further information ever again.

Information pages containing text, pictures, sounds and videos will bring another dimension to the visit. Visitors will have access to cultural data via their mobile phones or tablets, whilst walking through the aisles.

For those unable to travel or wishing to plan their visit, they may now view the entire system from home directly on the cemetery's website.

The "memory Cloud". This is the central database that will allow people from around the world to search through all the cemeteries equipped with eternal.

The cemetery's address and the plot's location appear very quickly and those who have been searching for a relative for many years will finally get their wish granted.
